
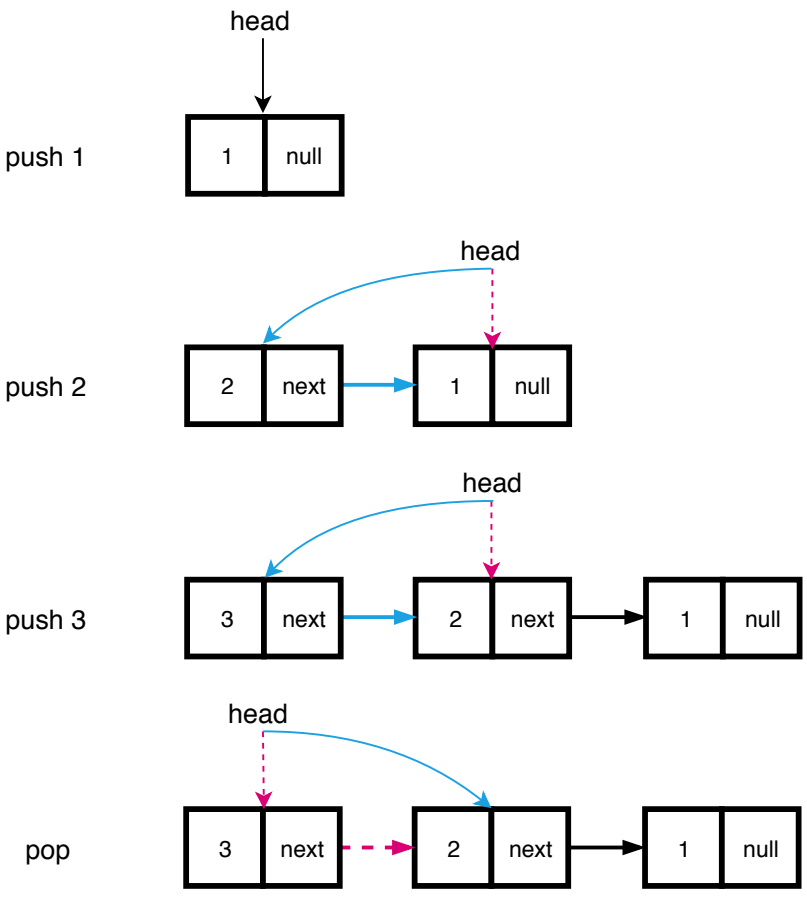
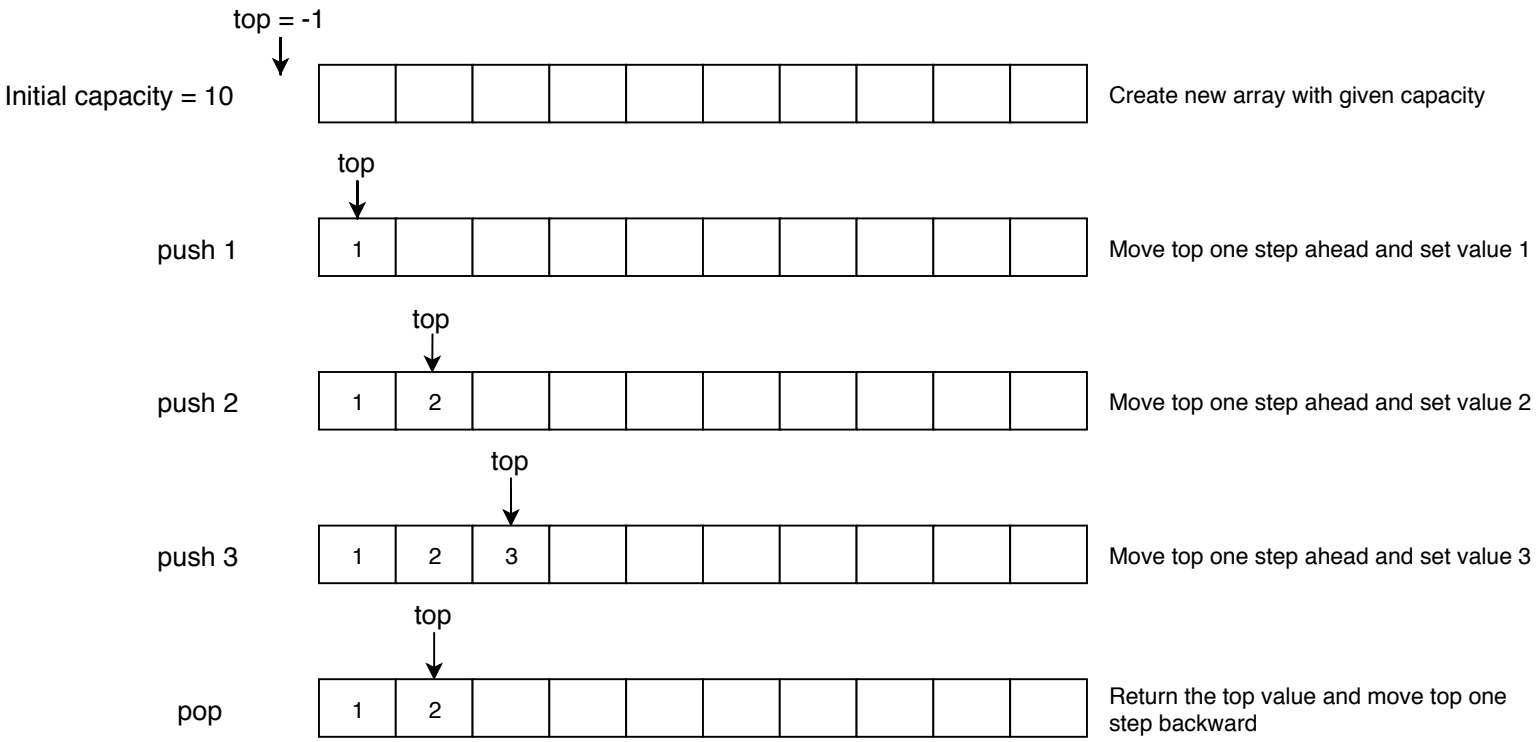
Implement Stack with Linked List



Create new node with the given value and let the head pointer point to the new node.

Create new node with the given value, set its next pointer point to the current head node and let the head pointer point to the new node.

Create new node with the given value, set its next pointer point to the current head node and let the head pointer point to the new node.

Get value of the head node, let the head pointer point to the next node.


Implement Stack with Array
